## **Radiator Simple WiFi Authentication**

Offering overview

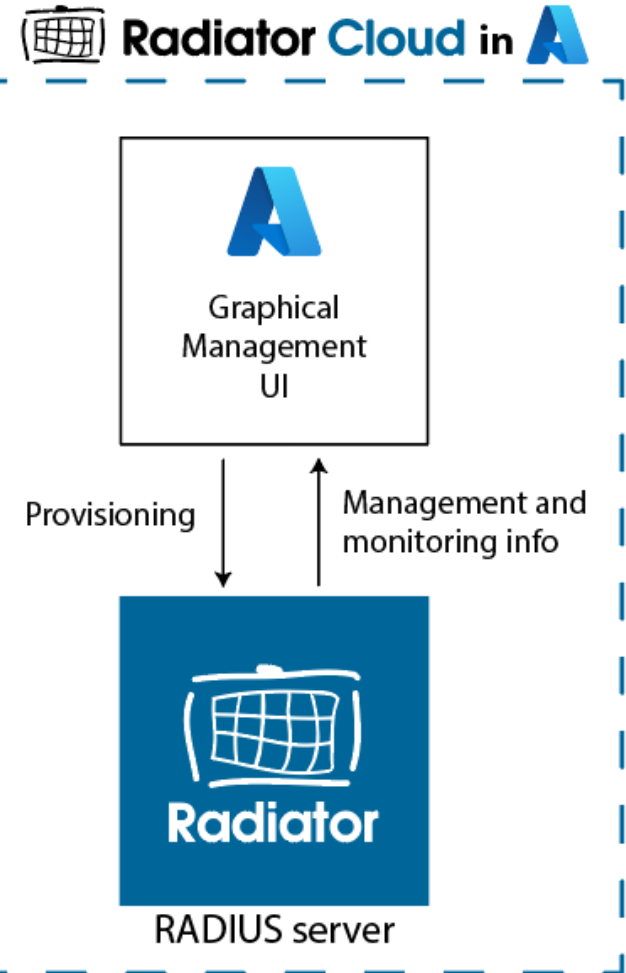

# What is Radiator Cloud for Azure?

Radiator Cloud is an Azure Native RADIUS authentication solution.

It is deployed, hosted, managed and monitored all within Azure.

Radiator Cloud is powered by Radiator, a commercial grade RADIUS server with hundreds of active customers around the world ranging from schools, universities and enterprises to global communication service providers.

Quick and simple to deploy, secure cloud solution.

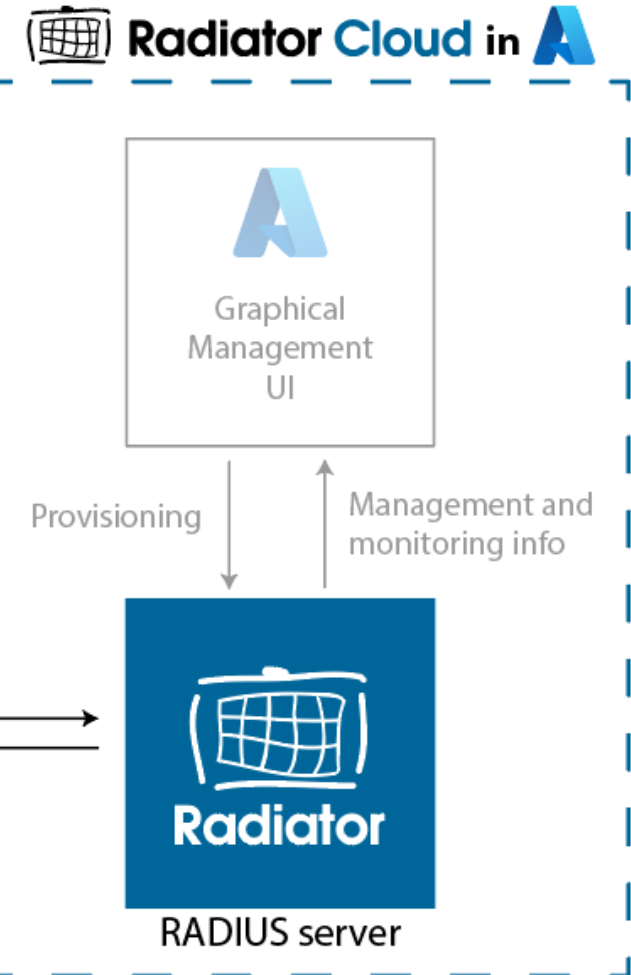

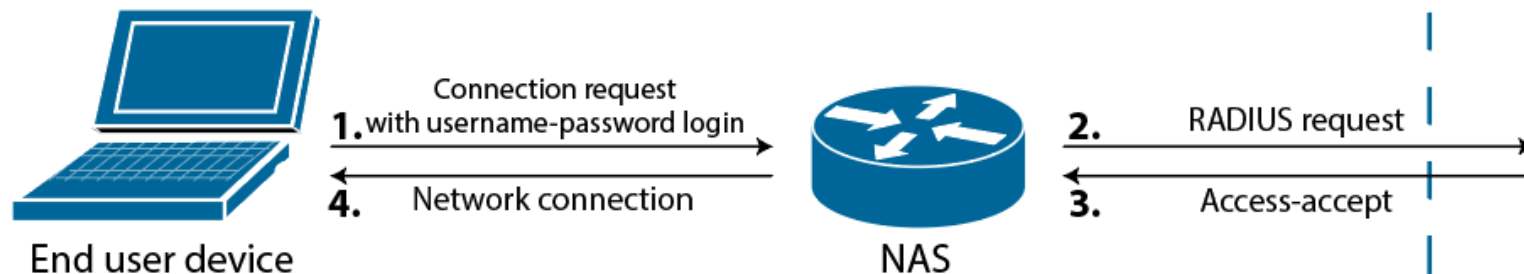

# Radiator Simple Wifi Authentication

Radiator Simple Wifi Authentication enables organisations simple username-password authentication for Wi-Fi access.

The solution allows you to authenticate network access for:

- Members of your organisation (e.g. employees or students)
- Contractors with bring-your-own-device model
- Guests

# Why choose Radiator Cloud?

With Radiator Cloud, you get a solution that runs entirely in Azure

- Only customer tenant has access to the application
- Management with enhanced version of Azure GUI
- Costs are easy to track and estimate, billing is done together with other Azure subscriptions

Radiator Cloud is powered by Radiator's own RADIUS server and all components come from Radiator and Azure
